However, Photoshop doesn't always do what you expect. This chapter shows you the rules of Photoshop and how to do everything within them.

The CloudApp team will create something custom for your blog, company, or brand if you let them, which is a great opportunity to get a more specific service. They have several Photoshop alternatives for you

to choose from, including Photoshop Lightroom, Photoshop, and Photoshop CC. The easiest Photoshop alternative to work with is Photoshop Lightroom, as it is more like a separate program and a lot less complex to use. These products work side by side, but Photoshop Lightroom is a superior option. The main drawbacks of the cheaper products are they are meant for beginner users, which means that they are not the most precise, and the features are not as robust as Photoshop's. The Pen tool makes it easy to draw and shape objects. Use the Magic Wand to select an area and click “Select”. The Brush tool allows you to paint an object. You can resize an image by selecting it in Photoshop and using the View / Zoom menu. The Polygonal Lasso tool allows you to select and move a selected area of pixels. It’s also useful for drawing shapes and lines. The Eraser tool lets you paint out an area of pixels, and the Spot Healing Brush tool will restore blown out areas of pixels. You can also perform many other tasks using the keyboard, such as typing text, cropping photos, and resizing and rotating photos.

Step 1: Create a Simple Image To get started you will need to create a simple image. Start by creating a new document and call the file Simple.jpg. Use the Brush tool (E) to draw a rectangular brush shape and fill it with black.

Step 2: Adjust the Brush Settings Next, right-click on the brush shape and select “Brush Preset”. A window will appear with a variety of preset brushes. Click “New Preset”, or use the + button to create your own custom brush. Choose a brush with a relatively small square size, and create a simple gradient with the black brush.

The Default setting is the brush you just created. Click the Cleanup icon in the top menu bar to open the window shown in the image below. Select “Hand” from the drop-down menu. A menu will appear with options to Zoom, Zoom to Fit, Reset Brushes, Reset Tool, Remove Hand, and Clear Hand. Click “Hand”. A clip-art hand will appear. Click and drag the hand to the bottom of the window. Drag the hand to the top of the window and release it there. The image will now be under the hand. Q: What happens to neutron star when it runs out of iron core? If the iron core (in the center of a neutron star) runs out, what happens to the neutron star? Does it collapse into a black hole? I hope it doesn't to be anymore. A: The core of a neutron star is a neutron degenerate fermion gas in beta equilibrium. Given the density and temperature, it looks like iron. When it runs out, there will be no more electrons, and the number of protons will balance. The result is a neutron star where the core is completely neutronized. Since neutron degeneracy pressure will still hold it all in its center, the star doesn't collapse. It only gets smaller. Stars larger than about a few solar masses will not be subject to gravitational collapse. See this, for example. Note that the core itself is only about 0.1 times the star radius. The core is probably the densest thing in the star, but this only matters in the outer core, where neutrons are the main component. The core where protons are the main component is very small compared to the total mass of the star.
