GIMP GIMP, Figure 9-19, is a free, open-source raster image editing program. It is similar to PhotoDraw and many of the other programs, such as Photoshop Elements and Paint Shop Pro, in that it offers layers. If you want

Introduction to Photoshop
Elements First things first,**

let's get Photoshop Elements in your place. First log into your Adobe ID and get your license key. If you don't have one yet, a no-risk 30-day trial is available here. Download Photoshop Elements from Adobe.com Ready to try it? There's nothing like a brand-new computer to really get you started with your graphics or photography! Have fun! Download Photoshop Elements to your computer

and install it. You can open the program via the shortcut icon in your Windows taskbar. Figure out what you need to do and how to do it. Photoshop Elements has a lot of options and controls (tools) to do just about anything you can imagine. The main program interface is divided into three panels (or tabs): The big canvas, which you will use for drawing, rendering and editing images. The tools (or

buttons) to apply layers and do various editing functions. A second panel for dialog boxes and special controls. This panel has two panes, one for the dialog box itself, and one for additional buttons that control the dialog box. To get started, go to the first panel and click on the canvas (background) to start drawing. You can draw lines, circles, polygons, and even edit other images. You can

also place objects and arrange them in 3D or 2D environments. To add an image file, double-click on it, and go to the Layers panel. From here, you'll have many options to edit it. The Layers panel. It has a window on the left for your layers, and a full-screen preview window on the right. You can add a new layer of any type: image, vector, or text. Vector layers can be adjusted by using the tools

on the tool bar. These include Pen, Pencil, and Text tools, as well as the Gradient tool for drawing gradients. Here's a tip: Each layer has a Label field on the top right. Some people prefer to use this field for layer naming instead of the Title field. Either way, both are equally useful.

Photoshop Elements offers a powerful selection tool. You can select any part of an image using the polygonal

(or lasso) tool. To edit the
selection, you can

Photos like this are ever so popular now and we are happy to see some US folks flying by on their many interesting and luxurious business trips. See the beautiful Volvo if you haven't already -- can't wait for 2010's mid-size to roll into showrooms. Pass on some spy fodder; you know it'll end up on the Internet and that counts for more

than some shiny coupe you saw. Plus, there are at least a few real secrets (if you know what to look for) about these cars that you might not know about. While we love the new S60 and it's all-wheel drive, some cars are better at the super-high-strung executive plaything (aka weekend camp, anyone?) and others are better at the daily grind of urban commuting. Bentley continues their 19-year run

of mid-size luxury sedans with their 6th installment in their oh-so-classy brand. The 2009 Bentley Beaumont seems to be the model -- and it's hard to miss since it's the widest and tallest of the lot. But the differences from last year's show car are marginal and in fact, very small. In the end, it's a great-looking car, it's fun to drive and it delivers the luxury-car feel but with the comfortable interior of your

suburban sedan. We can't wait until 2010 to see what the rest of the line looks like. General Motors has canceled plans for the Chevrolet Volt, a plug-in hybrid, and is instead working on a hydrogen-fuel-cell powered model, the company's chief executive said Tuesday. "We need to rethink the entire category," GM Chief Executive Dan Akerson said during the company's quarterly

earnings call. "We need to think differently about plug-in hybrids, and we need to look at a new approach to fuel cell vehicles." An executive familiar with the program, speaking on condition of anonymity because the car isn't publicly announced, told Reuters that GM intends to launch its hydrogen fuel-cell vehicle, probably initially at the 2013 Los Angeles auto show. "It will be a compact

vehicle that will be ready to go at the time of the showing," the executive said. The starting price is expected to be around \$50,000, the executive said. GM is betting heavily on hydrogen fuel cells to address concerns about oil's future supply and to meet more stringent air-quality standards. The Chevrolet Volt is built on the

Q: If $f(x) = x^2 + \cos(x)$, what is the radius of convergence of $f(z)$? How to compute the radius of convergence of the function $f(z) = z^2 + \cos(z)$. I found that $f'(z) = 2z + \sin(z)$. Then $|f'(z)| = 2|z + \sin(z)|$. Then is the radius the solution of $2|z| = \sqrt{2^2 + 2^2}$

However, I don't know if it is right. A: If f is analytic on D , $\{z : |z| = r\}$, then f is continuous on D .

Therefore, the radius of convergence of $f(z)$ equals r ; this radius is the supremum of all $r > 0$ such that all derivatives of f exist on D , and they are continuous there. Q:

Extracting ESRI shape from WKID QGIS The geometry I want to extract is on the map However I am struggling to get the QGIS Extract Referenced Features tool to extract the geometry. I am unsure what

the WKID is referring to. How do I get the QGIS tool to select the feature for me and not the default feature layer. A: If you are trying to extract polygons from a shapefile, the location of the polygons in the shapefile has no bearing on what the WKID in the QGIS toolbox is. Thus it does not make sense to ask where the WKID is located. The WKID is actually the Wkid, which is a unique identifier of the

format: "Wkid"=jedrek So if you have a shapefile of polygons, the shapefile has a unique id for each of the polygons. The question that is most appropriate is: How do I extract the polygon that is geographically closest to a Wkid? If you want to extract the closest polygon of a particular Wkid, you can use the Intersect tool on your vector layer, and select the geometries for the closest feature in the

Results pane. Or in this case, you can
