A: You should first figure out what the problem is and what you want to achieve, if this is a webserver. If this is a networked PC, you can use a port forwarding tool like (1) NetPortForwarder or (2) IPTables on the server to direct the requested port to the remote server. The former is Windows-based, while the latter is a Linux-only tool. If you only want to test whether a page is accessible or not, a client like (1) Offline-FTP or (2) SuperFTP can be used. It works like any other client, though only tests the first connection to the server and does not store the results. To see whether a page has errors, you can use a standalone tool like (1) FUEL or (2) ErrorViewer. The latter can also be used to copy, change or save the errors to another file. It does not require the webserver to be running, either. It just runs on the local PC. As far as I know, there is no solution that solves all your problems at once. If you are trying to improve a web server, use (1) Apache Benchmark or (2) Web Server Benchmark to test your server and then the respective utility to see the exact issue with your setup. If you are trying to access a site for offline viewing only, use the tools I listed, since this is the easiest. If you want to improve your server, I would suggest using FUEL. If you use FUEL, the PHP support is via the PHP-CLI interface. In this case, it is a different interface than the one provided by the webserver. The PHP CLI interface is provided by many (1) CLI PHP Builds or (2) PHP on Linux APT.

This invention relates to the use of aqueous compositions containing nonionic surfactants to treat surfaces of porous substrates. In particular, the invention relates to the treatment of substrates having an aqueous medium in contact with the substrate surface to form a protective coating.

Most porous surfaces are permeable to water. Aqueous compositions, commonly referred to as cleaners, are used to treat these surfaces in a variety of environments. For example, porous surfaces in the form of flexible wall paper, such as bathroom, paper or wall sheeting, absorb water from the air and are, therefore, susceptible to

A: One of the best ways to solve this is using 2 different patterns for separating those 2 strings. Pattern p1 = Pattern.compile(".*\\.pdf"); Pattern p2 = Pattern.compile("\\.pdf"); Matcher m = p1.matcher(txt); Matcher m2 = p2.matcher(txt); String first = m.group(); String second = m2.group(); The output of this method is a first and a second string separated by a., those 2 Strings can then be converted to an array using split(", "), so the result of this method is a string array like this:

```
["crawshawandchambersadvancedlevelstatisticspdfdownload",  
"crawshawandchambersadvancedlevelstatisticspdfdownload"]
```

You can then convert the string array to an arraylist. ArrayList list = new ArrayList(); for (String str: "[" + first + "," + second + "]){ list.add(str.split(",")[0]); } This for loop will return an arraylist with only the first 2 strings. Q: Is ██████████ an emphatic negative? I found it in the box of a very old friend of mine's parents, and I asked him what it was, to which he answered that it was a toy they had bought for their children (children, here, meaning the parent's grandchildren, since the parents have passed away). I thought maybe it was some kind of joking or maybe they had children of their own (even though they had passed away), but he had no idea of the language it was

written in. Now I've been thinking about it and I feel like it could be a euphemism for "no" in English but I'm not sure. A: □□□□□□ is the most common phrase you'll see at a point of a well-established story where the speaker wants to emphasize a point they are making. It's better to use □□□□ instead of □□□□□□. □□□□□□ is typically used to emphasize the size of the object or action when compared to something else. □□□ e79caf774b

A: You could do this: #1 : use your friend's pc: PS1="Enter friend's password: " #2 : use *nix in your pc, after login as your friend, enter this: sudo cat /etc/passwd | grep root #3 : use your pc find /etc/passwd -type d | grep root | cut -f1 -d: don't do this ^^ as you don't want anyone to steal your friend's password UPDATE! We just found a solution for your problem with "power" button Go to CTRL+ALT+DEL Type in "lock screen" Check the option "Display messages when screen is locked" and "Display messages when screens are locked" as 1 minute

The city of Pittsburgh is considering criminalizing the "improper disposal of manure" in an effort to address the blighting of downtown neighborhoods by dogs and their owners walking along the city's streets. The municipal code states that "any person who shall wantonly and maliciously throw, drop or otherwise place animal excrement" shall be guilty of "a misdemeanor of the second degree."

ADVERTISEMENT Under Pennsylvania law, a person may be convicted of a second-degree misdemeanor if it is shown that they do the same thing "willfully." The city's Animal Care and Control Department is considering what is called a "litter abatement program" to more effectively stop dog owner behavior and actually apply enforcement. Because so many dogs are in the city's hundreds, not all will be caught by the litter abatement program. Under the plan, animal control officers would be out in neighborhoods in specially assigned teams to cite dog owners for violating the law or to issue a warning. This would be achieved by administering citations to dog owners with a warning to appear in court if they are convicted of a criminal offense, or if there is a failure to pay an existing court-imposed fine. ADVERTISEMENT The city could also help to issue fines to dog owners who don't comply with the regulations on "harmless animal activity." Those to receive warnings and fines under the plan might include dog owners who allow their dogs to run loose, those who leave food in their yard for their dogs to eat
