Hey guys, I got a Macbook Pro 3,1 running 10.11.5, and I was trying to install an older version of Python for a side project I'm working on. I'm using bootcamp to run ubuntu. However, the only disk partition I have available to me is Macintosh HD. I boot into Ubuntu with my liveCD and mount the partition as /dev/sda5, but whenever I try to install python it says it can't write the file because it's on a read-only file system. I've also tried to run as root and change the permission but nothing seems to work. Any advice on this?

A: Simply boot into macOS and run Disk Utility from the Utilities folder, format your

backup drive and mount it in Ubuntu. As Apple does not provide with any official image of macOS, you need to install the command line tool to mount the Mac's disk as read write. A laser device is to be used in an optical measurement device and an information processing device. The laser device is used to irradiate a sample with a light beam to measure optical characteristics (e.g., reflectance and transmittance) of the sample. For example, Japanese Patent Application Publication No. 2013-302305 (hereinafter, "JP 2013-302305") proposes a laser device in which a light beam emitted from a Fabry-Perot semiconductor laser device and a light beam reflected by a sample are introduced into one resonator, and the light beams are combined by a beam splitter. In the laser device, the light beam emitted from the Fabry-Perot semiconductor laser device and the light beam reflected by the sample are introduced into one resonator.

However, the light intensity is about several dozen percent, which is different from a light intensity of about several hundreds percent in the case in which a beam emitted from a solid-state laser device is introduced into one resonator. Accordingly, in the case in which the light intensity is different between the light beams, it is difficult to always control the light intensities of the light beams to be equal to each other. Patent Literature 1 discloses a configuration in which a laser device includes a first resonator for combining a light beam emitted from a solid-state laser device and a light beam reflected by a sample with each other, and a second resonator for combining the light beams which have passed through the first resonator with each other. Anyone who's ever been on vacation in another part of the world probably knows the feeling of deja vu, when the sense of returning to familiar surroundings is strong even though a lot of time has passed. For many, that's often also the feeling when approaching a good vacation is underway. How much good are you taking advantage of right now? If you are struggling to make the most of your time and money, a vacation can be an excellent way to recharge your batteries and make the most of your budget. But if you are the kind of person who is just going through the motions because you hope that maybe, you might find yourself there next year, that won't be a vacation at all. What if you could experience a vacation in only a small fraction of your potential vacation budget, while taking advantage of all of your vacation options? If you try it, you'll likely discover that there is a lot you

can do to maximize your time on vacation, even when you have to use the bare minimum. Can Vacations Pay Off? One of the best-kept secrets of the travel industry is that vacations can actually be profitable for you, even when you use the minimum amount of time and money. The concept is that vacations can be an excellent way to establish better expectations with your finances. When you enjoy a vacation, you usually let go of a portion of your savings in an investment that will generate a return, but when you fall short of that goal, you feel disappointed, which in turn likely leads to frustration, which may lead to you not returning as often. When you try to save money on vacations, you may be more likely to notice that you don't have as much in your vacation budget, which in turn makes you more likely to spend your available money on it as well. How Much Vacation Will It Cost You? Let's say you want to spend three weeks on a beach

vacation in the Caribbean. You've already planned your dream vacation, but you'd like to do it on a budget of \$2,000 per person. Here's how to break down the numbers: $\$2,000 \div 3 \text{ people} = \66.66 per person. To spend that much on your vacation, you

A: Simple solution. Use the absolute path to the file inside the HTML `` In this case, it should be `` As others said, you can either add the source code for this in your `<code>` and the path directly to the file or just use the full path: If you have `` then you need to change it to `` Then the link will look like `` Of course you will have to make sure that your server is set up to look for requests from the user agent you are running your Wget script from. An alternate solution You can, however, use a php file instead of inlining the file directly into your HTML. This is much easier to maintain and is still much

faster. You will have to have PHP installed.
Here's a sample page: And here's the
abc.php file: "> A: Your path to the file
looks wrong. "> your code here Try this: ">
