
Franz 5.3.1 PORTABLE Crack

the chips that were produced as the tool traversed a W-crack tended to be shorter, thicker and wider than those that were produced in A-cracks. The reason for the difference may lie in the fact that the cutting edges of the tool cause a wedging action at the leading end of the W-crack, causing the chip to become narrower and shorter, and hence increasing its rigidity. W-cracks do not readily fill with chip material as do A-cracks and do not show a tendency for the chip to roll up the rake face (see figure 59). Thus the deformed material on the leading edge of the W-crack was not able to slide up the face of the crack in the manner of chips that were produced in A-cracks and that were observed to roll up the rake face. One factor that may have contributed to this increase in rigidity of the W-crack chips is the presence of the 'cam action' formed by the guiding edge of the tool near the bottom of the crack. This wedging action causes the leading edge of the chip to become narrower and shorter, and hence increases its rigidity. (The presence of a guiding edge of the tool was also noted to further increase the rigidity of the chips produced from the right side of the crack in U.S. Pat. No. 2,414,220). Mallock (1881) noted that in the event of a narrow crack, as compared with a very wide one, there is a tendency for the chips to be shorter, narrower and weaker. The shape of the initial chip is also an important factor, and he cites examples of chips that were 'crooked and ill-formed'. He also says that the disappearance of the leading edge may occur very soon after the formation of the chip and that the chip may at any time disappear or become detached. (Mallock, 1881, *ibid*).

Franz 5.3.1 Crack

If you're a big guy, the thicker hands of the Ocu Splitter Gloves will be a godsend for you, much like your ghetto boot is to a smaller climber, but the difference here is the user will be able to jam even in these sizable cracks, making them far more useful than the thin hand-covering BD Splitter, even if you can't fit your whole hand in the crack. I've currently got four pairs of BD Splitter gloves, but now I've just ordered three of the thick Ocu gloves instead because the BD gloves were not keeping my hands comfortable enough for comfort, but I'd end up jamming on them anyway. I'm a 170lb kinda guy, and I find a good pair of gloves one of the most important pieces of protection in my climbing wardrobe because I spend a lot of time aloft, and the chance of someone walking up behind me and putting their big feet on my butt and putting my hand in their armpit so they can hold on to their own backpack and I can't shake them off is not a likely event, but a very possible one. The thick Black Diamond Splitter gloves are comfortable enough for me, even though they have extra bulk, but their thin liners, while waterproof, are not large enough to cover my entire hand, and I often found myself losing traction and ripping my skin in thin-hand cracks. My favorite qualities of the cracker-upper, for sure, are the easy to grip and control design, small size, seamless piece of sartorial art; the smooth leather upper and unobtrusive branding. Not bad features. I was certainly expecting more. But, in my mind, I've seen a lot of nice shoes in this price range with far less pizzazz. I'm still a convert. Sec8ef588b
